rgbassurance.com.au

RGB Assurance Pty Ltd is an engineering consultancy that prides itself on the provision of excellent professional services and products, in the niche areas of systems and software safety assurance. We are based in Queensland but also have offices in Perth. Due to recent successes and company growth, we have decided to extend our graduate recruitment program. To this end, we are interested in hearing from students who will graduate at the end of this year with a software/electrical/mechatronics engineering, information technology, applied mathematics or computer science degree.

As a successful applicant you will:

- have the supervision and mentorship of industry-leading experts in engineering analysis and development of technological systems;
- work in an enriching environment where continued professional development is encouraged;
- receive sponsorship and support through the Engineers Australia pathway to achieving Chartered status as a professional engineer;
- have the opportunity to work on flagship projects with big name clients in a number of important industries; and
- be offered an attractive starting salary.

Who We Are Looking For

Because we are often retained to perform engineering development or review of safety- or mission-critical systems, we are looking for graduates who have demonstrated an ability to perform at the very highest level, and who possess a high level of mathematical maturity. Successful candidates will:

- have very strong analytical skills;
- have good mathematical skills;
- possess excellent verbal and written communications skills;
- be able to commute daily to our offices on St Georges Terrace, Perth, WA; and
- be willing to work as part of a team, with occasional periods of minimal supervision.

How
To
Apply

To apply, send us an email incorporating your CV, academic transcript, personal contact details, and a covering memo explaining how you satisfy the above requirements and why you want to become part of the RGB Assurance team. The position is a permanent appointment and is Perth-based. We are accepting applications for internships immediately. Please see our website or scan the QR code below for information about application lodgement dates.

Graduate Testimonials

Paul
Graduate

“ I joined RGB Assurance as an intern over the 2019/2020 summer break while studying my Bachelor of Mechanical Engineering at Curtin University. As part of this internship, I was tasked with a Research & Development project that involved building a complex simulation for a real-world problem. This project was a great introduction to the Safety Critical Systems Engineering, as it was extremely enjoyable and was a real challenge. In combination with the friendly atmosphere and assistance from industry leading professionals, this was an invaluable internship for an aspiring professional engineer.

Following on from my internship, I had done well enough to be offered a permanent position, after graduating at the end of 2020. Although it has only been a year since starting in my role, I have already had the privilege of working on many large, interesting projects in the Australian Engineering Industry, which has accelerated my professional growth and kept me enjoying every moment of my role as a Graduate Engineer at RGB Assurance. On top of this, the mentorship that I have received from the many industry leading professionals that work at RGB has been a huge influence on my personal and professional growth, and I believe this is what makes RGB Assurance stand out amongst other companies.

RGB Assurance is the perfect place for a graduate role if you want to learn quickly, be challenged, do work that matters, be recognised for your achievements, and most of all, enjoy your work. ”

Graduate

“ I began at RGB Assurance as an intern, tasked with developing an in-house web application over the course of the summer holidays of 2018/2019. Following the internship, I was hired part-time as an undergraduate software engineer while I completed my studies. Over the course of the year, I was exposed to a wide variety of experiences that helped me get a massive kick start to my professional career.

Upon graduating from UQ with a Bachelor of Engineering (Software) and Bachelor of Business Management in 2019, I was officially hired as a full-time graduate software engineer. In my time as a graduate, I have already been engaged in projects that cater to both of my degrees and challenge me professionally. At RGB, your professional and personal goals are a matter of importance and are a legitimate factor into what you work on day to day. I receive close mentorship from highly experienced registered engineers, and in a short amount of time have learned many invaluable lessons.

As RGB Assurance is a smaller company, I find that employees get much greater attention and support, when compared to other popular consulting firms. With all these factors, RGB Assurance is a great workplace for graduates who are looking to develop into competent professional engineers. ”
